

USAGE AND EMPTYING

Prepare the toilet for use by placing hydrated peat brick into the base - peat should be level with the agitator in a horizontal position. The peat should be moist but never wet or soupy.

Seated usage is recommended male or female. The trap door should remain open to receive solid waste. While seated, liquid waste will be diverted to proper area. Paper products may be placed in the compost bin. We do not recommend putting anything else in the compost (garbage, etc.)

Liquid wastes are emptied by releasing both side front latches, raising the bowl and removing the bottle for capping. Dispose of urine in an appropriate manner and rinse bottle to cleanse.

DO NOT PLACE COMPOSTED HUMAN WASTE AS FERTILISER FOR EDIBLE PLANTS OR VEGETABLES.

CLEANSING

A quick spray of water is all that is usually required to clean your toilet surface. More stubborn dried-on soil may be removed with a paper towel moistened with a solution of vinegar and water. The paper towel may be placed into the compost medium.

NO SYNTHETICS!

NATURE'S HEAD

What sets us apart?

- 5 year warranty
- Separation of liquid and solid wastes results in odour free operation and ease of disposal
- Full-size moulded seat ensures safety, comfort and easy cleansing
- Composting handle, vent hose, and fan may be mounted on either side of unit allowing ease of use and optimal space utilisation
- Fully supported liquid tank provides extension beyond mounting pedestal
- Unit arrives ready for installation requiring only external vent
- Completely self-contained and portable
- Gross Weight empty 15 Kgs
- **AFFORDABLE**

NATURE'S HEAD

Self-Contained Composting Toilet

The **eco-friendly** solution for sanitation

Suitable for:

**Caravans, Motor Homes,
Boats, Horse Floats, Sheds,
Workshops & Week-enders**

Proudly distributed in Australia
by:-

The development of the Nature's Head refined the concept of the composting toilet, producing a user-friendly, more economical and aesthetically improved toilet. The toilet's unique moulded design incorporates stainless steel components and hardware into a high-quality, durable product.

The Nature's Head requires no pump-outs or holding tank. There is no clogging or odour associated with its use.

The waterless, urine-separating design contributes to the extraordinary holding capacity of the head. The composting section will hold approximately 60-80 uses. For part time usage by 2 to 3 people, this likely represents several months without emptying. Full time users can expect 3 to 5 weeks capacity. The urine bottle, containing about 10 litres, will require more frequent emptying (approximately every 2 to 5 days).

\$1,590

**Inc GST
plus Freight**

Manufactured in the USA by Nature's Head and distributed by EnviroPro, this composting toilet is designed to provide an economical environmentally safe method of dealing with human waste. This self-contained, aesthetically pleasing toilet is the perfect fit for installation in Tiny homes, sheds, RV's, boats, caravans and camper trailers.

WHAT IS IN THE BOX?

- Toilet - white granite
- Inside vent flange
- Agitator handle
- Allen wrench to install handle
- 2 mounting brackets with knobs and screws
- 2 meters of single pin cable for 12 volt fan hookup
- Fuse and fuse holder for the 12 volt application
- Liquids cap
- 1.8 meters of 1 1/2" hose for vent
- 1 x Coir-Peat brick

LOCATION & INSTALLATION

Prime consideration when locating the head is adequate room for opening the lid and lifting the bowl rearward for servicing of both the solid and liquid chambers.

The unit is secured to the floor using 2 L-brackets and 4 countersunk screws. The head may be secured to a 3/4" plywood base in order to avoid the drilling of unwieldy materials. Take care to vent the toilet and power the circulating fan. All components for accomplishing this, except the external vent, are provided with your toilet.
